

PRESS RELEASE

Subversion With Free Web-Based Access Control Management Tool

With codeBeamer Managed Repository (MR) Subversion provides a comprehensive administration tool that supports project- and role-based access control of Subversion repositories.

Stuttgart, December 02, 2009 - Intland Software, leading supplier of collaboration and application lifecycle management solutions for software development, offers with codeBeamer MR the perfect mix of simplified Source Code Repository Management, Issue Tracking and Project Management for Subversion, Mercurial and git.

Equipped with highlights like

- unified project-, group- and role-based administration tools across multiple repositories
- Directory Level Access Control
- SSH authentication
- lightweight wiki, issue tracking and project management
- 100% web-based
- Remote API

codeBeamer MR especially benefits smaller companies. As a lighter version of its big brother codeBeamer, codeBeamer MR is the tailor-made solution for development teams who are working with Subversion, Mercurial or git, and striving for consistent, efficient access control.

A free download version of codeBeamer MR is available under <http://intland.com/products/cb-mr/overview.html> as well as a video- and info-screenshot-tour under <http://intland.com/products/cb-mr/tour.html>.

Intland Software is a leading provider of collaboration and application lifecycle management solutions for software development. Intland's codeBeamer has won several productivity and innovation awards in the categories of collaboration tools, knowledge management, change and configuration management tools.

International organizations like Allianz, ASUS, Bayer, Continental AG, Daimler, Dassault Falcon, EDS, EADS, Lufthansa, US Army, USDA, Siemens, Sun Microsystems and many others have trusted in Intland's experience for years. The company's headquarter is Stuttgart/Germany, with a subsidiary in Silicon Valley, USA.
